Dear Joshua,

I am sorry that no more reprints are available on the article dealing with the non-respiratory variants of S. cerevisiae. This was an incidental study, which came up during a project involving the use of ethylene -- and propylene oxide for the sterilization of food. At the time, we repeated the observations many times and it would be easy to duplicate it. Nothing more was done about it.

I should point out that the article contains a few misprints. Page 44, right column, line 10 from the top should read A, C and B, and on line 11, the figure 563 should read 552. With kindest personal regards,

Yours very sincerely,

H. J. Phaff
